DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1,3,11 and 12 are rejected under 35 U.S.C. 102(e) as being anticipated by Grifka et al (US 6,615,792).

As to Claims 1,3,11 and 12 Grifka et al discloses a fuel shut-off system for a carburetor substantially reduces or prevents the delivery of fuel to an engine when the engine is turned off and as it coasts to a stop. The system incorporates solenoid valve 48, having a first position which obstructs a vacuum bypass passage 40 communicating between the fuel chamber and the fuel-and-air mixing passage, and a second position which enables communication between the vacuum bypass passage 40 and a vacuum conduit 32 which otherwise communicates with a near atmospheric pressure source. See col. 4, lines 1-40.

Allowable Subject Matter

Claims 2 and 4-10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references by Phelan, Berry et al and Keller all disclose a carburetor for the internal combustion engine.
